Classic Metals from Chemetal are our most popular metals, with good reason.

Chemetal has the largest collection of these HPL and solid metals that you'll find anywhere. Think stainless appliance look with 46 design choices. Aluminum. Stainless. Brass. Copper. Bronze. Black. And more (Like #906 Brushed Copper Aluminum shown above). These materials are design work horses, ideal for inlays, cut-to-size, strips, panels and anywhere you want the modern, luxurious and energetic look of real metal. Classic Metals are available in 3 Series, each with advantages specific to your use and budget:

700 Series HPL Classics

Benefits:

- True high pressure metal laminates, metal foil fused to laminate backer.
- European quality, made in Germany.
- Huge selection. Many design choices that emulate brass, copper bronze and stainless.
- HPL laminate backer offers increased impact resistance.
- Easy to fabricate using woodworking equipment.
- Lightweight, apply like traditional laminates.
- Stainless steel options. (special blade needed for cutting).
- Budget brushed aluminum and stainless aluminum options.

800 Series Traditional Classics

Benefits:

- Impressive depth of design, these are rich chrome plated and solid brass metals.
- Durable designs.
- Sourced in USA.
- Contributes to LEED for recycled content.
- Material without backer can be bent or adhered to substrate for clean edge.
- 2 foot width, 8' and 10' length plus custom lengths and sizes.

900 Series Anodized Classics

Benefits:

- Durable anodized aluminum, made in USA.
- Cost-effective design material.
- Can be bent or adhered directly to substrate for clean edge.
- Aluminum is a soft metal, fabricated with woodworking equipment.
- Contributes to LEED for recycled content.
- Available with low pressure backer or find HPL match in 700 Series.
- 4 foot width, 8' and 10' length plus custom lengths and sizes.

CHEMETAL TECHNICAL DATA

Below please find an abbreviated version of our technical data. More complete info is viewable and downloadable at chemetal.com.

USE:

Chemetal metal designs and laminates are recommended for interior use on vertical and light-duty horizontal surfaces. Please contact Chemetal if you are uncertain about the use of Chemetal in any application. Caution should be taken on surfaces that may be exposed to harsh chemicals, acidic beverages (alcohol, colas, etc.) without cleaning surface for lengthy periods of time.

STORAGE:

Store flat, not on edge. The laminates should be stored face-up in a cool, dry area and in a completely supported flat position. Use a top sheet of chipboard or similar material to hold stored sheets flat. Protect material from twist, rack and edge damage.

HANDLING

Many Chemetal designs are solid aluminum and may distort or kink if handled incorrectly. To prevent surface distortion, large sheets should be handled by two people and transported face up. Additionally, please view our "How to Handle Chemetal" video at chemetal.com under Downloads>Videos.

PROTECTIVE MASK:

Although Chemetal is supplied with a protective mask, care should be taken when handling. Exposure of masked sheets to light or heat for long periods of time may cause problems with the removal of the protective mask. It is recommended to leave mask on surface of the laminates during fabrication. Additionally, masking tape, or extra protection in routing work, may be applied over the protective mask. Color uniformity and other quality checks should be carried out on the sheets beforehand by lifting up the edge of the mask and laying or taping back down.

CLEANING AND MAINTENANCE:

Clean with a soft cloth using mild soap and water or nonabrasive glass and metal cleaning liquids. Do not use ammonia, abrasive cleaners or pads, or harsh solvents. Magnetic board should be cleaned with magnetic board cleaner.

SHIPPING:

Many Chemetal designs may be rolled for shipping. Magnetic laminates (150 Series and #160), solid metal sheets and sheets with a low pressure laminate backer added cannot be rolled. The exception: 24" wide designs with low pressure laminate backer.

Weights shown reflect standard way material is stocked.

(Shipping cont.)

Chemetal recommends that all sheets of solid metal be shipped flat. The customer assumes all responsibility for sheets of solid metal that are rolled and shipped in a carton(s). When materials are rolled, care must be taken to avoid bending. Do not compress coils. Material with a backer must have the face out. Rolling with the face in will crack the backing material. Roll loosely to a minimum diameter of 18 inches. Chemetal cannot roll sheets of 48" wide metal that are backed with a low pressure laminate backer, these must be shipped flat.

All HPL backed Chemetal (200 and 700 Series) may be rolled and shipped in a carton. It is often cost effective to ship HPL backed Chemetal flat for orders greater than four sheets.

DIRECTIONAL ARROWS ON SHEETS:

Many Chemetal designs are marked on protective mask or label with directional arrows, indicating direction of finish. With multiple sheet installations, sheets must be installed with arrows pointing in same direction, otherwise sheets may reflect light differently and not match up.

CHEMETAL SUBSTRATE AND ADHESIVE CONDITIONING:

We recommend that all Chemetal materials, and the adhesives and substrates they are to be bonded to, remain in the same environment for a period of five to seven days for optimal pre-conditioning. A minimum of 48 hours is recommended for pre-conditioning. These times are recommended although decorative metal laminates have minimal dimensional change.

Chemetal should not be used in areas exposed to water, moisture, high humidity or high heat for prolonged periods of time. Do not use Chemetal in exterior installations except noted 600 Series designs.

LOW PRESSURE LAMINATE BACKER LIMITATIONS:

Chemetal 200 and 700 Series and some 300 Series designs are high pressure laminates. All other materials are solid metal with a backer option. When a laminate backer is added to any other Chemetal product # or Series, this is a low pressure laminate backer. Low pressure laminates cannot be used with hot melt glue systems and edgebanding machines that adhere at temperatures in excess of 150 degrees Fahrenheit.

RECOMMENDED SUBSTRATES:

Proper substrates must be used and careful bonding procedures observed. Substrates should be good quality plywood, high density particleboard, fiberboard or MDF. Do not use drywall, plaster, concrete or gypsum board.

Substrate should be a smooth surface free of debris, dirt and imperfections. Inconsistencies in substrate surface will project through and show in finished product.

Chemetal #353 Alu Medium (custom iteration) as office system inserts.

Chemetal #701 Polished Aluminum, #901 Polished Aluminum flooring for Marc Jacobs runway show.
